

Work Type Definition: Energy Consulting & Marketing

I. Description

- A. The County owns facilities producing steam, chilled water, and electricity. The consultant will assist with tasks including: allocating production between steam and electricity; negotiating power purchase agreements; tracking and engaging Minnesota Public Utilities Commission (PUC) dockets that are relevant to the County; participating in MISO energy markets; marketing of renewable energy credits; and other relevant activities. The consultant may contribute to strategic planning activities intended to address long term energy needs of the county, including determining the production source of energy resources, risk management of energy supply, evaluation of policies that affect the ability of the county to meet its needs, and other relevant activities and policies.

II. Provided by consultant

Services and deliverables supplied by the consultant may include the following:

- Energy market studies
- Financial models
- Power purchase agreements
- Policy evaluations and reports
